### REC\_DS using C\_Week 1\_COD\_Question 6

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

John is tasked with creating a program to manage student roll numbers using a singly linked list.

Write a program for John that accepts students' roll numbers, inserts them at the end of the linked list, and displays the numbers.

##### ***Input Format***

The first line of input consists of an integer N, representing the number of students.

The second line consists of N space-separated integers, representing the roll numbers of students.

##### ***Output Format***

The output prints the space-separated integers singly linked list, after inserting the roll numbers of students at the end.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 5

23 85 47 62 31

Output: 23 85 47 62 31

### **Answer**

```
#include<stdio.h>
#include<stdlib.h>
struct node{
    int e;
    struct node *next;
};
typedef struct node Node;
int main(){
    Node *List,*position,*newnode;
    int n;
    scanf("%d",&n);
    List=(Node*)malloc(sizeof(Node));
    scanf("%d",&List->e);
    List->next=NULL;
    position=List;
    for(int i=1;i<n;i++){
        newnode=(Node*)malloc(sizeof(Node));
        scanf(" %d",&newnode->e);
        newnode->next=NULL;
        position->next=newnode;
        position=position->next;
    }
    position=List;
    while(position!=NULL){
        printf("%d ",position->e);
        position=position->next;
    }
}
```

**Status :** Correct

**Marks :** 10/10
